# Summary

# The company

Atradius Reinsurance DAC ('the Company'), with its offices at 2nd Floor, La Touche House, International Financial Services Centre, Dublin 1, Republic of Ireland, is a leading market reinsurer providing capacity to primary insurance companies in credit and bonding insurance. Atradius Re currently assumes business from over 60 countries, on all continents, maintaining a balanced diversity within the portfolio. The underlying business consists of approximately 58% credit insurance and 42% bonding, based on premium volume. The business is underwritten by a multilingual, highly trained and experienced, international team of underwriters at Atradius Re's offices in Dublin,

Atradius Reinsurance DAC is a subsidiary of Atradius Investments Limited, also based in Dublin, which is a subsidiary of Atradius N.V., a company incorporated in the Netherlands. Atradius N.V.'s ultimate parent is Grupo Catalana Occidente, S.A, a company incorporated and listed in Spain.

### **Regulations**

For the preparation of the Solvency II reporting as at 31<sup>st</sup> December 2016, the company has applied the following rules:

- Solvency II laws and regulations (Directive 2009/138/EC, Delegated Acts (EU) 2015/35):
- Statutory Instrument No. 485 of 2015 "European Union (Insurance and Reinsurance) Regulations 2015";
- The transitional information requirements of EIOPA's Delegated Acts, article 314;
- The Implementing Technical Standards and EIOPA Guidelines such as Guideline BoS 15/113 "Recognition and valuation of assets and liabilities other than technical provisions":
- The guidelines issued in the form of policy notices, Solvency II Information Notes and Q&A's by the Central Bank of Ireland (CBI).

### **Solvency Position**

The following table summarises the Solvency II position of Atradius Reinsurance DAC as at 31st December 2016. On 18 April 2016, the shareholders of Atradius N.V. provided a subordinated loan to Atradius Re of a principal amount of EUR 75m. The subordinated loan qualifies as a Tier 2 basic own funds item as set out in article 73 of the European Commission's Solvency II Delegated Regulation (2015/35).

Solvency position under Standard Formula	mln	mln
	2016	2015
Own funds Solvency II	681	575

### A-1 Business

# A-1 a) Name and legal form of the undertaking

Atradius Reinsurance DAC (Designated Activity Company)
2<sup>nd</sup> Floor, La Touche House
International Financial Services Centre
Dublin 1
Ireland

# A-1 b) Supervisory authority & group supervisor

The regulatory authority is the Central Bank of Ireland, with an address at New Wapping Street, North Wall Quay, Dublin 1, Ireland. The supervisor of the Group to which the Company belongs, which is Grupo Catalana Occidente S.A., is Dirección General de Seguros y Fondos de Pensiones, with an address at Paseo de la Castellana, 44 CP 28046, Madrid, Spain.

### A-1 c) External auditor

External auditing services are performed by chartered accountants and statutory audit firm Deloitte, with an address at 29 Earlsfort Terrace, Dublin 2, Ireland.

### A-1 d) Holders of qualifying holdings in the undertaking

Atradius Investments Limited, a company incorporated in Ireland, is the Company's holding and parent company.

Atradius Investments Limited is a subsidiary of Atradius N.V., a company incorporated in the Netherlands.

Atradius N.V., with its office at David Ricardostraat 1, 1066 JS, Amsterdam, the Netherlands, and its subsidiaries (together referred to as 'Atradius') is a global credit insurer which aims to support its customers' growth by strengthening their credit and cash management through a wide range of credit insurance management products and services. These services include credit insurance, bonding, reinsurance, information services, collection services and instalment credit protection. Atradius offers products and services from strategically located offices on six continents and employed 3,736 people as at 31 December 2016 (2015: 3,333).

# Grupo Catalana Occidente

The ultimate parent of Atradius N.V. is Grupo Catalana Occidente, S.A. (GCO), with an economic stake of 83.2% (35.77% directly and 47.43% indirectly through the holding company Grupo Companía Española de Crédito y Caución, S.L.).

The shares of GCO are listed on the Continuous Market of the Barcelona and Madrid stock exchanges as part of the IBEX Medium Cap Index. Currently, 38% of its capital is floating and the main shareholder is INOC, S.A., holding 62% of the capital of GCO. Thanks to the stability of its results and a prudent investment policy, GCO has a solid solvency position as can be seen from the below:

Key figures (EUR million)	2016	2015	% change 2015/2016
Long-term capital market value	3,508.5	3,262.5	7.5%
Equity	2,629.8	2,585.9	1.7%
Subordinated debt	204.9	211.8	-3.3%
Return on long-term capital	12.6%	12.1%	
Funds under management	11,672.1	11,055.8	5.6%
Total revenue	4,235.8	3,826.1	10.7%
Consolidated result	324.5	296.1	9.6%

GCO is one of the leaders in the Spanish insurance sector and in global credit insurance. Founded more than 150 years ago, it has experienced constant growth, thanks to its capacity to adapt to change and remain loyal to its principles, which are truly insurance oriented.

GCO is committed to the professional development of its employees and insurance agents, its personalised customer service and the trust its shareholders have in the organisation.

GCO is committed to the professional development of its employees and insurance agents, its personalised customer service and the trust its shareholders have in the organisation.

# Strategic goal of GCO

To be leaders in the field of risk protection and long-term savings of families, as well as SMEs, and to be international leaders in commercial risk coverage.

# Growth

Defining markets targeted by the group, appropriate product and service development, and establishing suitable distribution channels to reach the customer.

# **Profitability**

Recurrent and sustained profitability based on technical and actuarial rigour, investment diversification and processes that allow tight cost ratios and quality service.

# **Solvency**

Prioritise own resources generation and continued growth in order to support the group's expansion, ensuring compliance with commitments and ensuring appropriate shareholders returns.

### Fundación Jesús Serra

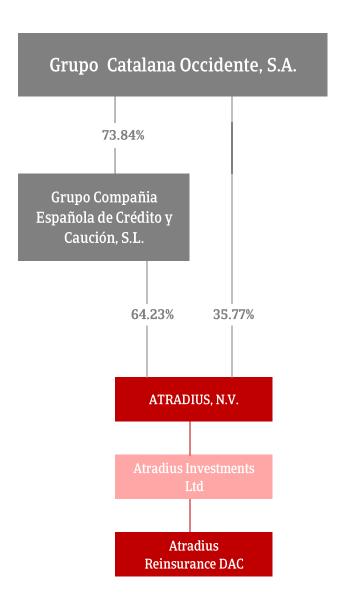

Fundación Jesús Serra, named after the founder of the Grupo Catalana Occidente, was created in 2006 in order to channel the philanthropic actions of the Group and to drive the human and professional values that were characteristic of its founder. For this reason, the foundation participates in more than seventy projects in the areas of business, teaching, investigation, culture, sport and social action. In this way the Group contributes to the construction of a fairer, more united and more developed society, in which values such as initiative, effort, healthy competition and continuous improvement prevail.

# A-1 e) Where the undertaking belongs to a group, details of the undertaking's position within the legal structure of the group

Atradius Reinsurance DAC is the 100% owned subsidiary of its parent company, Atradius Investments Limited, which is itself a 100% owned subsidiary of Atradius N.V., a company incorporated in the Netherlands.

The shareholder structure is illustrated in the chart on the following page:

# **Shareholder Structure**

# A-1 f) Material lines of business and material geographical areas of business

### LINES OF BUSINESS

# **Credit and Bonding Reinsurance**

Atradius Re is the leading specialised credit and bonding reinsurer in the market, providing reinsurance solutions for the credit insurance and bonding business of primary insurers throughout the world, through a dedicated team of multilingual, highly trained and experienced international underwriters.

Atradius Re currently assumes business from over 60 countries, on all continents, maintaining a balanced diversity within the portfolio. The underlying business consists of approximately 58% credit insurance and 42% bonding, based on premium volume.

Atradius Re has created long-standing relationships with its clients and specialist brokers. The quality of these client and broker relationships is underscored by the Company's unique offering: combining the Atradius Group's skills in the primary underwriting of credit insurance and bonding risks with its own distinctive approach and expertise in structuring reinsurance solutions. In this way, Atradius Re can anticipate and respond to its clients' specific and changing needs. It continues to evolve and succeed in the face of increasing competition and is one of only very few reinsurers to have the capacity to reunderwrite. Those services create a very distinctive added value to its clients. Moreover, because it can cross-promote and thus provide an evolving portfolio of additional expert services, Atradius Re is widely acknowledged to play an important role in the international development and growth of the credit and bonding insurance industry, particularly in emerging markets. The Company is an active member of and contributor to ICISA, PASA, DIMA and the Aman Union.

### **GEOGRAPHICAL AREAS OF BUSINESS**

The Company is authorised and regulated by the Central Bank of Ireland and is authorised to conduct reinsurance business in the EU internal market in accordance with the provisions of the European Union (Insurance and Reinsurance) regulations, 2015. It is authorised to write business as a foreign reinsurer globally and is licensed and/or registered individually in Argentina, Bolivia, Chile, China, Colombia, Ecuador, Guatemala,

India, Mexico, Paraguay, the Republic of Panama, Uruguay and Venezuela. The full list of geographical areas from which the Company assumes business is as follows:

### Europe:

Austria, Belgium, Croatia, Czech Republic, Estonia, France, Georgia, Greece, Hungary, Italy, Kosovo, Latvia, Lithuania, Macedonia, The Netherlands, Poland, Portugal, Romania, Russia, Slovakia, Spain, Serbia, Slovakia, Slovenia, Turkey, The United Kingdom.

#### Middle East:

Israel, Lebanon, Saudi Arabia, United Arab Emirates.

### Americas:

Argentina, Brazil, Columbia, Ecuador, Guatemala, Jamaica, Mexico, Paraguay, Peru, United States

### Asia:

Bahrain, Cambodia, China, India, Indonesia, Japan, Jordan, Malaysia, Oman, Pakistan, Philippines, Singapore, Thailand.

#### Africa:

Algeria, Egypt, Kenya, Mauritius, Morrocco, Nigeria, South Africa, Tunisia,

#### Oceania:

Australia.

# A-1 g) Any significant business or other events that have occurred over the reporting period that have had a material impact on the undertaking

### **Subordinated Loan**

On 8 April 2016, the Board of Directors of Atradius Re passed a resolution to enter into a subordinated loan agreement with a group of lenders. All lenders are resident in Spain and are either part of the GCO Group, or, are minority shareholders of Compania Española de Credito y Caucion, a company that holds 64.23% of the shares of Atradius N.V.

The loan is for EUR 75 million, and is to be treated as Tier II capital. The rationale for the additional capital contribution in the form of a subordinated loan is to reinforce the solvency II capital position of Atradius Re.

The loan agreement was executed on 18 April 2016.

# A-2 Underwriting performance

# Stable growth in an unstable business environment

The following financial numbers are stated in accordance with the basis of preparation of the financial statements, which is FRS 102 "The Financial Reporting Standard applicable in the UK and the Republic of Ireland" and FRS 103 "Insurance Contracts" ("UK and Irish GAAP").

(EUR thousands)	2016	2015	YoY (%)
Gross earned Insurance revenue	156.626	440.004	1.5%
	456,626	449,894	
Gross insurance claims and loss adjustment expenses	(255,031)	(246,413)	(3.5%)
Gross insurance operating expenses	(188,852)	(190,419)	0.8%
Reinsurance result	(6,496)	(9,529)	31.8%
Technical result	6,247	3,533	76.8%
Release of equalisation reserve	116,983	4,237	2,661.0%
Technical result after change in equalisation reserve	123,230	7,770	1,486.0%
Net investment income	4,455	17,703	(74.8%)
Operating result before finance costs	127,685	25,473	401.3%
Finance costs	(6,228)	(2,786)	(123.5%)
Profits before tax	121,457	22,687	435.4%
Tax on profits	(15,182)	(2,833)	(435.9%)
Profits afer tax	106,275	19,854	435.3%
Employees (FTE)	26	24	7.5%

	GROSS		NET	
	2016	2015	2016	2015
Claims Ratio	55.9%	54.8%	55.1%	54.6%
Expense Ratio	41.4%	42.3%	43.4%	44.6%
Combined Ratio	97.3%	97.1%	98.5%	99.1%

The following table provides a breakdown of the Company's gross earned premium by region:

	2016		2015	
	€′000	%	€′000	%
Europe	289,526	63%	284,813	63%
Americas	79,276	17%	82,066	18%
Asia	56,875	12%	58,816	13%
Middle East	12,831	3%	6,726	1%
Oceania	11,576	3%	10,330	2%
Africa	6,542	1%	7,143	2%
_				
Total	456,626	100%	449,894	100%

In 2016, Atradius Re achieved positive results, in an ongoing uncertain environment. The technical result for the year was EUR 6.3m million (2015: EUR 3.5 million). Reinsurance revenue from the Atradius Group grew by 3% (2015: 4.3%). This growth is as a result of increasing levels of new business and of maintaining the excellent customer retention rate of 93%. There was a marginal decrease in third party revenues.

The net combined financial year claims ratios of Group and third party business increased from 54.6%, in 2015, to 55.1%. The low oil price and demand crisis in the commodity markets have continued to cause uncertainty in economic conditions, especially in emerging markets that depend highly on commodity trade and oil revenue. This has contributed to the higher claims ratio in 2016, despite a significant reduction in third party claims expenses (21.9%) compared to 2015, due to the success of targeted cycle management. The net acquisition cost ratio for the financial year has reduced from 42.3%, in 2015, to 41.1% in 2016, consistent with a higher claims ratio. Consequently, the net combined expenses and commissions ratio has also decreased from 44.6% to 43.4%.

The Company transfers a portion of its reinsurance risk to external reinsurers/retrocessionaires, through a number of reinsurance arrangements, including quota share and excess of loss treaties. The reinsurance treaties are reviewed annually and in accordance with the Company's policy to select only reinsurers with a high quality standard of solvency/rating. The normal minimum requirement is an 'A' level rating. Following the introduction on 1 January 2016 of Solvency II as the new regulatory regime applicable to (re)insurance companies, an equalisation provision is no longer required in accordance with FRS 103 "Insurance Contracts". Consequently, the opening equalisation provision, totalling EUR117 million, has been derecognised and unwound in full in 2016.

### A-3 Investment Performance

The persistent low yield environment continues to have a negative impact on interest income. Total Investment income has decreased as the results in 2015 included large net realised gains, of EUR 13 million, compared to net realized losses of EUR (€0.3) million in financial year 2016.

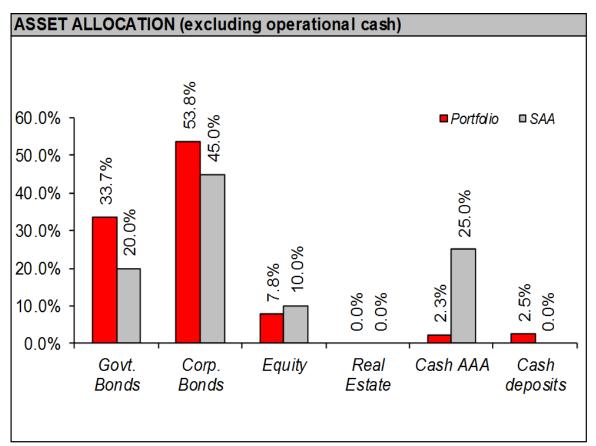

However, movement on unrealised gains/losses during the year is a positive EUR 7.7million.

The Company's investment strategy has remained on course with a focus on preserving capital to avoid large losses on the investment portfolio.

# Breakdown of investment income

(EUR thousands)	2016	2015	Yo Y (%)
Net interest income	3,366	3,600	(6.5%)
Dividends	2,444	1,842	(32.7%)
Realised (losses) and gains	(323)	12,978	102.5%
Impairments	(218)	(66)	(230.3%)
Investment handling expenses	(814)	(651)	(25.0%)
Investment result	4,455	17,703	(74.8%)
Gains and losses in the revaluation reserve  (EUR thousands)	2016	2015	YoY(%)
Equity securities	1.993	(9,230)	121.6%
Debt securities	5,688	(2,103)	370.5%
Total gains and losses recognised in revaluation reserve	7,681	(11,333)	167.8%

### B-1 General information on the system of governance

### B-1.1 Corporate governance framework

Atradius Reinsurance DAC ("the Company") endorses the importance of sound corporate governance. Key elements of independence, accountability and transparency create a relationship of trust between the Company and all of its stakeholders: employees, customers, suppliers, shareholders, regulators and the general public.

The Company is a designated activity company organised under the laws of the Republic of Ireland. The Company is a subsidiary of Atradius Investments Limited (also based in the Republic of Ireland) which is itself a subsidiary of Atradius N.V. a company incorporated in the Netherlands.

Atradius N.V.'s ultimate parent is Grupo Catalana Occidente, S.A, a company incorporated and listed in Spain.

The Company is authorised by the Central Bank of Ireland ("CBI") to carry on the business of Reinsurance and is subject to the minimum requirements as set out in the Corporate Governance Code for Credit Institutions and Insurance Undertakings (as amended from time to time).

Primary responsibility for corporate governance within the Company rests with the Board of Directors ("BOD"). The BOD supervises the general affairs of the Company, taking into account the interests of the Company and its stakeholders.

The BOD is supported in its role by:

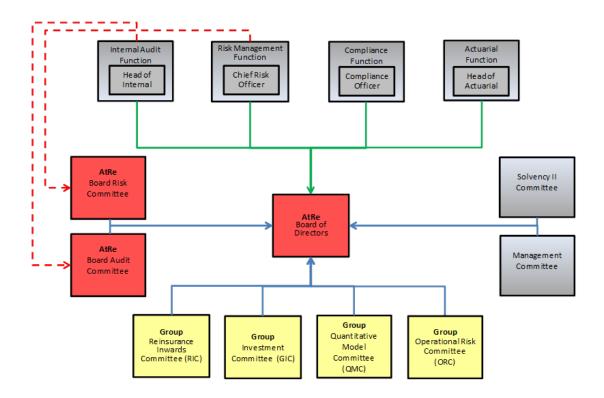

- The establishment of two board sub-committees Audit and Risk which make recommendations to the BOD within the remit of their terms of reference; and
- A number of Atradius Group Committees on which the Company has voting rights and whose activities are reported directly into the BOD and/or its sub-committees as necessary.

The Executive Directors ("EDs") are responsible for proposing strategies, for executing agreed strategies and for achieving the Company's objectives, policy and results. The ED are responsible for management and oversight of the general affairs of the Company and are supported in their roles by the establishment of:

- Four key functions Compliance, Risk Management, Actuarial and Internal Audit which report directly to the BOD and/or its sub committees as necessary; and
- A Senior Management Team that reports directly to the ED.

The Non-Executive Directors ("NEDs") are responsible for challenging, agreeing and overseeing the execution of strategies and must participate fully in the decision making process.

### **Corporate governance structure**

### B-1.2 Board of Directors ("BOD")

The BOD is represented by a balanced proportion of executive and non-executive directors. The majority of the BOD must be NEDs. There must be a minimum of five Directors appointed to the BOD and there must be at least two independent non-executive directors appointed to the BOD at all times.

The BOD receives its powers and duties from the Company's shareholders by virtue of the Company's Articles of Association. These powers are then limited by legal and regulatory restrictions. These powers are subject to oversight by various bodies but most particularly by the Central Bank of Ireland.

The BOD meets at least four times in any calendar year. The BOD, following appropriate consultation with the ED, sets an agenda in advance of each meeting. To enable proper discussion of the items on the agenda for each meeting, the BOD is provided with all relevant information and documentation in advance of those meetings.

The BOD sets the Company strategy and oversees the implementation of this strategy by reviewing periodic and ad-hoc reports prepared by the ED, the Compliance function, the Risk Management function, the Internal Audit function, the Actuarial function, the External Actuary and External Audit as appropriate.

The BOD ensures the proper organisation of the Company, the implementation of a strong internal control system, the implementation of a strong enterprise risk management system and the definition and formalisation of suitable policies and procedures. The BOD provides direction concerning the running of the business in line with the Company strategy and is responsible for ensuring that these directions are executed by the Company.

All BOD members are required to attend all BOD meetings unless they are unable to attend due to circumstances beyond their control. The minimum quorum for decision making requires that there is a balanced representation of NEDs to EDs, ensuring a majority of non-executive directors is maintained with at least one INED present at all meetings. Decisions will be made on a simple majority basis. The Chair of the BOD retains the casting vote. The Secretary will formally record all minutes and decisions taken.

In accordance with the Articles of Association, the BOD formulates the Company's operational and financial objectives and the Company strategy designed to achieve these objectives. The annual budget and long term plan of the Company is prepared by the ED and is submitted to the BOD and Group stakeholders for their review and approval.

# **Board diversity policy**

The BOD must satisfy itself as to the suitability of all BOD appointees. It is the policy of the BOD to consider all BOD appointments on merit and candidates will be considered against objective criteria, having due regard for the benefits of diversity on the Board, including professional background, geographical location and gender. All appointments to the BOD must be documented in accordance with the ongoing requirements of the Corporate Governance Code and Fitness & Probity standards.

A member of the BOD with a conflict of interest with the Company will immediately report this to the Chairman of the BOD. A member of the BOD who has a conflict of interest with the Company will not participate in discussions and/or decision-making processes on any issues or transactions affected by the conflict of interest. A register of any and all conflicts of interest reported is maintained as part of the Company's records. Upon appointment to the BOD, all members are required to sign a Conflict of Interest and Fitness & Probity statement.

# B-1.3 Audit Committee ("AC")

The BOD must satisfy itself as to the suitability of all AC appointees. The AC supports the BOD in fulfilling its supervisory and monitoring duties with respect to the assurance of the integrity of the Company's financial statements, the external auditor's qualifications, and the performance of internal and external auditors. The AC monitors, independently and objectively, the financial reporting process within the Company and the system of internal controls. The AC also supports the ongoing communication between the External Auditor, the Internal Audit function and the BOD on issues concerning the Company's financial position and financial affairs.

**Internal Audit function** - Internal Audit fulfils an important role in assessing and testing the internal risk management and control system. The Director of Atradius Group Internal Audit reports to the Chairman of the AC and, with respect to day-to-day activities, to the Finance Director of the Company.

The AC consists of at least three members.

The AC has complete independence in performing its reporting and regulatory functions.

### B-1.4 Risk Committee ("RC")

The BOD must satisfy itself as to the suitability of all RC appointees. Enterprise risk management is a priority for the Company (at an entity level and as part of the Group) and helps steer its financial, operating and other risks. The RC supports the BOD in fulfilling its supervisory and monitoring duties with respect to the risk strategy of the Company. The RC is supported by the Atradius Re Chief Risk Officer (CRO) who reports into the RC on a regular basis.

The Risk Committee is responsible for reviewing and assessing the performance of the risk management function of the Company and for making recommendations as appropriate.

The Risk Committee forms part of the Atradius Re Board Approved Corporate Governance Framework and is responsible for overseeing and advising the Board in relation to the current risk exposures and future risk strategies of Atradius Re.

The Risk Committee and its individual members must operate in the context of, and must remain compliant with, the Corporate Governance Code for Credit Institutions and Insurance Undertakings.

Unless otherwise defined hereinafter, the terms used in this Risk Committee governance shall have the meaning as defined in the Governance Framework.

# **Composition of the Risk Committee**

The RC shall consist of all current members of the BOD. A quorum will exist if three members are in attendance provided there is a majority of NEDs in attendance (one of which must also be a member of the AC).

All members must have relevant expertise in the management of risks.

Voting rights apply to each member of the Committee with the chairperson of the meeting having casting vote to reach a majority decision.

The proportionality of appropriate representation between executive and non-executive directors must be maintained.

The Chairman of the Committee shall be a NED.

The Chairman may invite other employees or advisors to attend all or part of any RC meeting.

The BOD shall appoint one of the RC members as RC Chairman. The RC Chairman shall be primarily responsible for the proper functioning of the RC. RC Chairman shall act as the spokesperson of the RC and shall be the main contact for the BOD. In particular, the RC Chairman will take care of good communication with the BOD and consultants appointed by the RC. The RC Chairman will maintain regular contact with the chairman of the BOD.

# **B-1.5** Key functions

Four key functions have been established at the Company, all of which support the BOD in discharging its obligations. Article 13 of the Solvency II Directive defines a function, within a system of governance, as "an internal capacity to undertake practical tasks". These four key functions are **Compliance**, **Risk Management**, **Actuarial and Internal Audit**. The Compliance and Risk Management functions are described below. The Internal Audit and Actuarial functions are described later in sections B-5 and B-6 respectively.

# **Compliance function**

The Atradius Re Compliance function is an independent function and as such will not be placed in a position where possible conflicts of interest may occur between Compliance responsibilities and any other responsibilities. It consists of a Compliance Officer (CO) who must be formally appointed to the role by the BOD. The role of the CO is a Pre-Approved Control Function (PCF) under the applicable CBI regulations and any appointment to this role must be pre-approved by the CBI. The Compliance function supports the BOD in meeting its objective of complying with all applicable laws and regulations.

The CO's responsibilities include, among other things:

- ensuring the regulatory and operational compliance obligations of the organisation are duly implemented, monitored and reported in a timely manner;
- ensuring that all legal and company secretarial administration is monitored and controlled with timely record keeping and reporting;
- monitoring changes in applicable law or regulations and for assessing the impact thereof as well as assessing that internal processes are compliant;
- working on a preventive basis, by providing assistance and advice on all compliance matters;
- reporting directly to the BOD;
- acting as liaison between the Company and its regulators and is responsible for coordinating and maintaining a strong and transparent relationship with its regulators;
- The CO's independence is enhanced by the provision of an independent dotted reporting line to the CO of Atradius NV. This reporting line is specifically aimed at allowing adverse reporting to take place if such reports become necessary.

# **Risk Management function**

The Atradius Re Risk Management ("RM") function is independent and as such will not be placed in a position where possible conflicts of interest may occur between Risk Management responsibilities and any other responsibilities. It consists of a Chief Risk Officer who must be formally appointed to the role by the BOD. The role of the CRO is a PCF under the applicable CBI regulations and any appointment to this role must be preapproved by the CBI. The Risk Management function supports the BOD in meeting its objective of effectively managing its risk profile relative to its risk appetite and draws support from the Atradius Group Risk Management Function as necessary.

The CRO's responsibilities include, among other things:

- distinct responsibility for the RM function and for maintaining, and monitoring the effectiveness of, the risk management system;
- ensuring that effective processes are in place to identify, measure, manage, monitor and report on the risks to which the Company is, or might be, exposed to;
- responsibility for facilitating setting of the risk appetite by the BOD;
- reporting directly to the BOD via the Risk Committee;

# **B-1.6 Remuneration Policy**

The Atradius Group remuneration policy lays down the principles and key elements of sound and controlled remuneration of all Atradius' employees, including those of Atradius Re. The Remuneration Policy supports the Group's business strategy, objectives, values and long-term interest and is aligned with the size, organisational set-up, nature and complexity of the business activities of the Group. The Remuneration Policy is designed to improve the performance and the value of the Group, to motivate, retain and attract qualified employees and to contribute to sound and efficient risk management within the Group and to discourage taking more risk taking than is acceptable to Atradius.

Employees are entitled to variable remuneration components as a percentage of their fixed salary. The relationship between fixed and variable remuneration has been carefully considered, with a sufficiently high fixed component to allow for the non-payment of the variable component if performance criteria are not met.

Typical elements of total compensation are annual base salary, annual variable remuneration and other benefits. The Company does not provide stock options or share purchasing programmes. Supplementary pension schemes do exist in the form of a defined contribution scheme.

There have been no material transactions with shareholders, nor with persons who exercise a significant influence on the undertaking.

### B-2 Fit and proper requirements

Atradius Re is authorised by the Central Bank of Ireland ("CBI") and, as such, is required to comply at all times with the Fitness & Probity (F&P) regime which came into effect on 1 December 2012.

The domestic F&P regime was reviewed in 2015 in order to determine compatibility with Solvency II. The CBI deems that individuals subject to SII F&P notification requirements in Articles 42(2) and (42(3) align to the domestic F&P regime.

Under this regime, an individual that is appointed to a "controlled function" (CF) must comply with the F&P standards as prescribed under the regulations. A CF is defined as a role that exercises a significant influence on the conduct of the affairs of Atradius Re, monitors compliance or performs functions in a customer-facing role. Certain of these CF roles are referred to in the regulations as "Pre approved controlled functions" (PCFs) and these require the approval of the CBI before appointment.

Taking the nature of the roles into consideration, it is the policy of Atradius Re to ensure that all employees, directors and officers are:

- competent and capable;
- honest, ethical and act with integrity at all times; and
- financially sound.

The Atradius Code on Employee Background Screening sets out when background screening must take place and the manner in which it must be conducted.

In the case of those critical or important functions that are outsourced, the fit and proper requirements will be verified in accordance with the outsourcing policy.

### Fitness requirements

Atradius Re should be well placed to determine the particular demands of a CF/PCF, i.e. what qualifications, experience, knowledge and other relevant factors will make a person fit for the performance of that function.

### **Probity requirements**

Individuals proposed for CFs or PCFs must be honest, diligent and independent-minded and must act ethically and with integrity. Probity is a matter of character illuminated by a person's past behaviour. In general, where a person is found not to be a person of probity due to a lack of honesty, integrity or ethical judgement, that person may not be suitable for any CF or PCF.

Probity may also include individuals ensuring that they act without conflicts of interest.

Professionally propriety means that the person has throughout his or her life upheld the law and adhered to good commercial practices as outlined above and also adhered to good financial practices.

# **Approval process**

For those roles designated as CF roles or PCF roles under the regulations, the Atradius Re Compliance Officer (CO) is responsible for coordinating the screening of potential employees and, in the case of PCFs, for securing the approval of the Board to propose the appointment to the regulator and for securing the approval of the regulator before PCF appointment. The CO must satisfy themselves on reasonable grounds that the potential employee complies with the Fitness and Probity Standards and must obtain written confirmation that the individual agrees to always abide by those standards.

To obtain the CBI's approval requires the submission of an individual questionnaire ("IQ"), available on the Central Bank's website.

An assessment of compliance with the Fitness & Probity standards must take place at least annually but also in the event of promotion or demotion.

# B-3 Risk management system including the own risk and solvency assessment

As a global reinsurer, the Company recognises the importance of risk management. As part of the Atradius Group and in compliance with the requirements of Solvency II, the Company continues to strengthen its risk management capabilities by broadening its risk management scope and enhancing its existing risk management tools. Risk management and the relationship between risk and capital is a cornerstone of Solvency II and is embedded in the business.

As described later in Section C, the main risk to which the Company is exposed is underwriting risk, due to the nature of its business of reinsuring insurance contracts, whereby it assumes the risk of loss from organisations that are directly subject to underlying loss. The Company is also exposed to market risk, primarily through its investments, and also to credit, liquidity, operational and concentration risk, as detailed later.

### Risk management system

The risk management system comprises many aspects, of which the main ones are:

- **Risk strategy** providing the framework (risk appetite, tolerances and limits) with which risks are assessed in the light of financial goals, business strategy and regulatory requirements;
- **Risk governance** structure describing the main risk governance committees and, related to those, the assignment of authorities and how risk related decision-

- making takes place through these committees (see "Section B. System of governance" for additional information on the risk governance structure);
- **Risk management** policies, setting out how risk management and oversight processes are operationally implemented; and
- **Risk boundaries**, setting out the control limits in respect of the business the Company wishes to reinsure and the restrictions thereof.

# Risk strategy

These are the key components of the risk strategy:

- **Risk appetite** is the level of risk the Company is willing to assume and manage within a determined period of time;
- **Risk tolerance** is the level of risk that the Company is willing to assume in relation to a determined risk:
- **Risk limits** are operational limits established in relation to risk tolerance.

Next to capital related risk appetite, tolerances and limits, there are various tolerances and limits for different types of risk including, among other things:

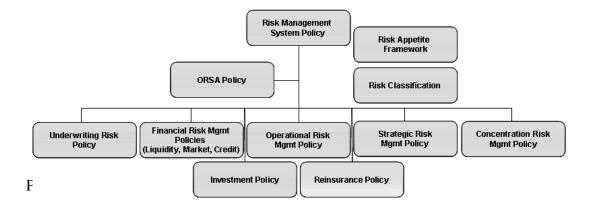

- Underwriting guidelines;
- Strategic asset allocation (SAA) for investments;
- Authority levels;
- Reinsurance underwriting authorities.

### Risk governance structure

The Risk governance structure ensures that risk-related decisions are taken in a clear and controlled manner and that risk management is embedded in the organisation. The Risk governance structure, including the Risk Management function and the Risk Committee, is described in detail in "Section B. System of governance".

# Risk management policies

A structure of risk management policies has been established to ensure aligned oversight through measuring, monitoring and reporting of risks:

In addition to these policies, the Company operates other policies and guidelines in relation to defined topics and specific processes within the Company such as Business continuity management, information security, and its compliance code.

These documents are all control mechanisms within the risk management system, providing clarity over expectations, appetite for different risks, and tolerances.

### Risk boundaries

The approved risk boundaries give a clear understanding of the control limits, as set by underwriting guidelines, in respect of the business the Company wishes to reinsure. Risk boundaries are used to steer and govern the business and enhance communication with stakeholders.

Risk boundaries are specified for both credit and bonding reinsurance. These risk boundaries are expressed through underwriting guidelines which define the types of business Atradius Re is authorised to write, with specific guidelines to type of product, capacity limit, types of exposure, term, and diversity of the underlying insurance ceded. Particular attention is given to ensuring the diversity of the business from third party clients and that exposure to any single country, company, or market is managed within agreed underwriting limits and capacity.

# Own risk and solvency assessment (ORSA)

As part of its risk management system, the Company conducts at least an annual Own Risk and Solvency Assessment (ORSA). The ORSA is closely linked with the Long-Term Plan, the Company's business planning time scale over 3 years, and evaluates risk and solvency positions, assuming both normal and adverse market conditions.

The ORSA is an integral part of the business, risk management and decision-making processes within Atradius Re. It analyses and reports the main risks to which Atradius Re is exposed, their resulting capital requirements and assesses the feasibility of the business plan, which in turn informs decision-making.

To determine and assess solvency positions and capital management requirements, the various risks to which Atradius Re is exposed, as identified through its risk management systems, are aggregated and quantified and the SCR is calculated, using the partial internal model (PIM), which is awaiting regulatory approval, and the standard formula (SF). Non quantifiable risks are also assessed and outlined in the ORSA report.

### B-4 Internal control system

The Company has established a framework of internal controls to assist in the achievement of the Company's objectives. The framework consists of numerous components that together comprise:

- **Control environment** the employees and the environment in which they operate (e.g. organisational values, governance structures, policies);
- **Risk Assessment** The Company must be aware of the risks that pose a threat to the achievement of its objectives. As part of the internal control system, risks must be identified, assessed, responded to and monitored;
- **Control activities** specific mechanisms that must be executed on an on-going basis to ensure that risks are managed;
- **Information and communication** to enable the Company to capture and disseminate the information necessary to conduct, monitor and control the business; and
- Monitoring The entire internal control framework, including the objectives and components must be monitored to ensure that it is operating as intended and reflects the current goals and vision of the Company, together with the overall environment in which it operates.

The Internal Audit and Compliance functions are important parts of the internal control system and they are addressed below.

### Control environment

Organisational values establish the ethical, social and environmental values to which the Company's employees should adhere. These values are outlined in the Company's codes on corporate values, conduct and corporate responsibility.

Employment practices establish the professional competencies and professional practices expected of the Company's employees. These competencies are outlined in the Company's policies on recruitment, remuneration, appraisal and development of employees. Moreover, the most important employment practices are outlined in specific codes, such as:

- Code of conduct
- Code on whistle-blowing
- Code on fraud risk management
- Code on customer due diligence
- Code on trading in securities
- Code on external representation
- Code on employee background screening
- Code on personal data protection
- Code on incident reporting
- Code on complaint management
- Code on auditor independence
- Code on anti-trust and fair competition
- Code on business in accordance with licenses

The Company has established various control mechanisms, implemented through policies and procedures related to organizational structures, organisational values and employment practices.

Risk underwriters are authorised to underwrite reinsurance contracts containing certain features based on their level of competence, and in accordance with a Board approved authority matrix. As an underwriter's level of competence increases, he or she is authorised to underwrite more significant features (e.g. longer duration of contract, larger

amount of maximum liability). The most significant features must be underwritten by a committee.

For the purposes of this document the key mechanisms in place within the Company for the component 'Control Environment' include:

Mechanisms	Description
Corporate governance	Principles and best practice provisions between the Board of Directors and the shareholders.
Corporate values	Corporate values governing the way staff treat each other, customers and other stakeholders.
Corporate responsibility	Sets out our vision and mission statement in terms of Corporate responsibility.
Code of conduct	Outlines the basic principles that apply to all employees.
Risk governance structure	The oversight, decision making bodies and structures within the Company.
Human resources	recruitment, retention, appraisal and development of staff.
Performance management	Performance management, measurement, incentives and rewards.
Proxies	Sets out delegated external signing authorities (ability to bind the Company contractually).
Signing authorities	Sets out the delegated internal signing authorities applicable to all staff.

### Risk assessment

For the purposes of this document the key mechanisms in place within the Company for the component 'Risk assessment' include:

Mechanisms	Description
Strategy	Setting of strategic objectives for the Company.
Page <b>32</b> of <b>91</b>	

Business planning Long term planning (LTP).

Business review meetings Periodic review between the management board of the

Atradius Group and Atradius Re.

Risk management system Creates, communicates and supports a common risk

terminology and positions policies and practices related

to risk management.

Operational risk ratings Pre-defined likelihood and impact scales used for the

rating of risks.

Business continuity strategy Defines the response to be taken by the Company to a

number of pre-defined business interruption scenarios.

Risk categories Pre-defined categories used within the Company to

collate similar sources of risk.

Risk appetite and tolerance Defines the amount of risk the Company is willing to

take in qualitative and quantitative terms.

ORSA Own risk and solvency assessment - process to

identify, assess, monitor, manage, and report the short and long term risks and to determine the own funds necessary to ensure that overall solvency needs are met at all times, taking into account the risk profile,

approved risk appetite and business strategy.

Strategy review process Periodic review of strategy.

Risk Registers Means of identifying, recording and responding to risks

that threaten achievement of objectives across the

Company.

Risk governance structure The oversight, decision making bodies and structures

within the Company.

### Control activities

The Company implements various control mechanisms. These are established through policies and procedures embedding segregation of duties, approvals, verifications, management reviews, and reconciliations.

Segregation of duties is embedded in the Company's underwriting process and in its financial transactions.

A financial transaction is commonly segregated by splitting the roles into an initiator, an approver, a verifier, a recorder and a reconciler. Each role is in principle held by a different employee. This reduces the risk of erroneous or inappropriate payments.

Approvals are embedded in the Company's underwriting and financial transactions processes and are formalised in a Board of Directors' approved authority matrix. Verifications are also embedded in the Company's underwriting and financial transactions processes.

Underwriters must disclose their identity when accessing the underwriting system. The same principle applies for access to the financial systems. Moreover, as part of a financial transaction, the written signature of an approver is confirmed by an employee acting as the verifier.

Management regularly reviews, including at monthly management meetings, management reports (financial and other key performance indicators) to monitor performance against budget, forecast, prior period, etc., to assess the extent to which the Company's objectives are being achieved and to identify adverse developments.

### Examples are:

- monthly management accounts detailing the financial performance and position of the Company:
- monthly management reports detailing the financial performance of the third party business:
- detailed monthly reports detailing performance of the third party business by class of business and development by underwriting year;
- client profitability reports detailing performance by cedant;
- an investment report which details the investment performance and investment position of the Company in terms of returns and allocation. In addition, it shows the credit rating of the debt instruments, the investment position split per currency and its value-at-risk; and
- a review of presentations the Company makes to Atradius Group Committees of which it is a member e.g. Group Investment Committee (GIC) and Provisioning Committee (PC).

For the purposes of this document, key mechanisms in place within the Company for the component 'Control Activities' include:

Mechanisms	Description
Compliance codes	Sets out minimum compliance standards adopted. Includes codes on, amongst others; fraud, incident reporting, whistle blowing, auditor Independence, etc.
Procedures standard	Addresses minimum content requirements, change control, communication, training and adherence monitoring around Procedures.
Accounting manual	Describes the accounting policy and practices.
Group control manual	Describes detailed procedures and processes pertaining to planning, reporting, transfer pricing/cost allocation, and cost control within the Atradius Group, including Atradius Re.
Business continuity policy	Sets out the policy for BCM, including impact analysis and strategy.
Application ownership	List of business applications and respective application and data owners.
Data quality policy	Sets out aspects of data quality, data ownership and how data is managed in systems and EUC applications.
Information security policy	Defines the principles to which all other security documents, systems and materials adhere.
IT general controls	IT controls that operate at a general level, such as access, change management, software development, etc.
IT application controls	IT controls that operate at an application level, such as check digits, logic tests, field validation, etc.
ORSA Policy	Describes the role of the own risk and solvency assessment within risk management and decision making.

### **Information and Communication**

The Company communicates internally through policies and procedures, but also through channels such as intranet, emails and newsletters.

To ensure that negative information can also be communicated upward, the Company has established a code on whistleblowing. This code establishes an alternative communication channel to the Director of Internal Audit, which employees can use to communicate negative information.

For the purposes of this document, the key mechanisms in place within Atradius for the component 'Information and Communication' include:

Mechanisms	Description
Annual report	Annual report of the Company
Atradius intranet	Internal intranet site hosting key information and news for all units
Risk report	Management information compiled for the board of directors which gives an overview of the company' risk profile – an overview of exposure from different risk types.
Monthly management report	Monthly analysis, review and reporting of financial and non-financial KPI's for the Company's business.
ORSA	Own risk and solvency assessment - process to identify, assess, monitor, manage, and report the short and long term risks and to determine the own funds necessary to ensure that overall solvency needs are met at all times, taking into account the risk profile, approved risk tolerance and business strategy.
Investment report	A report detailing the investment performance and investment position of the Company in terms of returns and allocation. In addition, it details the credit rating of the debt instruments, the investment position split per currency and its value-at-risk

# **Monitoring**

The Company has implemented various control monitoring mechanisms, such as control self-assessments, incident reporting and internal audit.

Control-self assessments are performed to monitor the effectiveness and efficiency of the Company's financial reporting controls ("FRC's"), non-financial reporting controls and its operations.

Financial reporting controls are performed to ensure that the Company's financial statements exclude material errors by preventing errors occurring or detecting errors that have occurred. The Company ensures this by requiring employees contributing to the financial statements to electronically verify that there are appropriate controls and the effectiveness of these controls.

Controls are stored in a system that details:

- what controls are in place;
- why the control is performed;
- which functions and employees perform the control;
- when and how often: and
- who is responsible for the control.

In addition, evidence of performance of controls is stored for review if necessary.

For the purposes of this document, the key mechanisms in place within the Company for the component 'Monitoring' include:

Mechanisms	Description
Business review meetings	Periodic review between the management board of the Atradius Group and the Company
Internal audit reviews	Five-year review cycle by internal audit focused on perceived areas of greatest risk.
Control self-assessments	Periodic assessments of key controls across the business in order to gain assurance over their design and operation.

Financial reporting controls Quarterly assessments of key controls over the

accuracy of the financial statements, in terms of their

design and operation.

IT general controls Quarterly assessments of IT General controls in terms

of their design and operation.

ORSA Own risk and solvency assessment process plays a

central role in monitoring risk profile and solvency

needs.

Code on incident reporting Sets the requirements relating to the reporting and

resolution of significant incidents.

Operational losses Recording and analysis of operational risk event losses.

# **Compliance Function**

The Compliance function is an independent function that reports directly to the board of directors.

The Compliance function is, among other things, responsible for ensuring adherence to all regulatory and operational compliance obligations of the Company, managing the relations with its regulators, maintaining compliance policies and educating employees regarding compliance. For additional information on the compliance function, please refer to Section B.1-5 Key functions.

#### B-5 Internal audit function

The Internal Audit (IA) function has been established at an Atradius Group level. The IA function is independent and all audit work undertaken is carried out freely, objectively and independently of the activity being audited/reviewed. The IA function has developed an Internal Audit charter specific to Atradius Re, outlining the authority, responsibility and governance of Atradius Internal Audit. The IA function is responsible for advising the BOD (through its AC) on the Company's system of internal control and provides a quarterly update to the BOD via the AC. The IA function attends the AC in person at least once a year and by teleconference on request. The IA function has independent access to the Chairman of the AC.

#### **B-6** Actuarial function

The Actuarial function is outsourced to Grupo Catalana Occidente S.A. via an intra-group outsourcing agreement. The Atradius Re Actuarial function consists of a Head of Actuarial Function (HoAF), who must be and has been formally appointed to the role by the BOD and who is supported in his role by a team of actuaries within Atradius Re. The role of the HoAF is a pre-approved control function under the applicable CBI regulations and any appointment to this role must be pre-approved by the CBI.

The functions of the Head of Actuarial Function includes, among other things, the following:

- evaluation of the accuracy and adequacy of the Solvency II technical provisions;
- validating of the consistency against the data quality requirements of Solvency II of the internal and external data used in the calculation of the technical provisions;
- reporting on the Company's solvency position and the level of statutory reserves required; and
- Supporting the Company's ORSA, including in particular the financial effects of stresses and scenarios and the impact of management actions.

# **B-7** Outsourcing

#### Introduction

This Atradius Re Outsourcing Code describes, in general terms, the approach and process for outsourcing from the inception to the end of the contract, including:

- the Solvency II criteria that are relevant to consider when outsourcing critical or important functions or activities;
- how a Provider of outsourced services ("The Provider") of suitable quality is selected:
- the details to be included in the Outsourcing Contract with the Provider; and
- business contingency plans.

The company can outsource critical functions or activities, but must retain overall responsibility for discharging all of its obligations under applicable laws, rules and regulations and must ensure that appropriate management controls and procedures operate to protect the company from risks and to comply with applicable laws, rules and regulations.

Key Functions are the following functions: risk management, compliance, internal audit and the actuarial function. A PCF individual within Atradius Re must be identified as having responsibility for the outsourced function and must be notified to the CBI.

## **Approvals**

The Board of Directors of the company approves all Outsourced services of critical or material functions/activities. Overall responsibility for the Outsourced activity/function remains with the Company itself and the Outsourcing must be adequately managed (for example with suitable business continuity plans in place).

# **Outsourcing Key Functions**

If the company intends to Outsource a Key Function, the following subjects must be addressed:

- it applies fit and proper procedures in assessing persons employed by the Provider that will perform an outsourced Key Function for the company, which means it ensures that the Provider checks the fitness and propriety of all persons working on the Key Function;
- it ensures that the person(s) within the company designated with overall responsibility for overseeing the outsourced Key Function possesses sufficient knowledge and experience regarding the outsourced Key Function as to be able to challenge the performance and results of the Provider. This person is to be notified to the Regulator.

# Outsourcing of Critical or Important Operational functions

## **Critical Functions:**

#### Actuarial Function

The Actuarial Function is outsourced via an intra-group outsourcing arrangement. The jurisdiction of the service provider of this function is Spain.

#### • Internal Audit

The Internal Audit Function is outsourced via an intra-group outsourcing arrangement. The jurisdiction of the service provider of this function is Spain.

# **Important Functions:**

#### IT Activities

**IT and Telecoms support** services are outsourced via an intra-group outsourcing arrangement. The jurisdiction of the service provider of this function is Spain.

**Reinsurance Accounting Database System support** services are outsourced to a service Provider located in Bermuda.

## **Informing duties to regulators**

The relevant Senior Manager that outsources must ensure that the Compliance Officer is informed so that they can inform the Regulator (a) prior to Outsourcing and (b) of subsequent material developments with respect to the Outsourcing. The company should describe, in its written notification to the Regulator, any outsourcing of critical or important functions or activities and the Provider's name. When outsourcing concerns a key function, the notification should also include the name of the person in charge of the outsourced function or activities at the Provider. This information duty must be exercised in consultation with the Group Compliance Manager.

## **Adequacy of System of Governance**

The Company considers that, given the applicability of the System of Governance to its risk profile and it's compliance with the Solvency II framework, that it is adequate to the nature, scale and complexity of the risks inherent of its business.

#### **C-O** Introduction

The principal risks to which Atradius Re is exposed are underwriting risk, market risk, credit risk, liquidity risk and operational risk, each of which will be described in this section of the report.

From 1 January 2016, Atradius Re's capital is quantified using the Standard Formula established in the Solvency II regulations.

However, Atradius Re has been modelling economic capital requirements for many years. Working closely with Atradius Re, the Atradius Group has developed its own model, using the main risk drivers of the credit insurance and bonding business such as exposure volume, buyer quality, correlations and underwriting strategy. Since the results of this model more closely reflect the business and risk profile of both Atradius Re, and the Atradius Group, than does the Solvency II Standard Formula, Atradius Re plans to use its internal model to calculate part of its regulatory requirements.

For that reason, GCO, as the ultimate parent company of Atradius Re, has formally submitted the partial internal model for the credit and bonding line of business for approval to the College of Supervisors (COS).

Until approval is granted, the standard formula will be used for regulatory purposes and the proprietary model will be used for internal decision-making purposes.

The table on the following page illustrates the contribution to the solvency capital requirement (SCR), as calculated under the standard formula (SF), of the various risk types to be described in this section:

Market Risk:	Q42016

Solvency Capital Requirement	536
MCR:	134

# C-1 Underwriting risk

In terms of the basic solvency capital requirement (BSCR) calculated under the standard formula, underwriting risk is by far the largest driver of Atradius Re's SCR with a charge of EUR 549m, representing 89% of the BSCR of EUR 614m before diversification.

## Identification

Non- life underwriting risk is defined as the risk arising from the non-life insurance obligations in relation to the liability covered and the process used in the conduct of the business. The Company incurs underwriting risk through its reinsurance contracts, whereby it assumes the risk of loss from organisations that are directly subject to underlying loss. It takes account of uncertainty in the results of these organisations related to existing insurance and reinsurance obligations, and to new business to be written over the following 12 months. The Company is exposed to the uncertainty surrounding the timing, frequency and severity of claims under these contracts, in addition to unexpected premium developments.

Non- life underwriting risk is directly related to the nature of our business. Through credit reinsurance, we reinsure customers against the risk of non-payment of trade receivables. Through bonding reinsurance, we guarantee a beneficiary that our customers will meet contractual, legal or tax obligations.

#### Measurement

Underwriting risk is measured both on individual treaties and exposures and on the aggregated risk portfolio using several risk metrics and tools, such as:

- internally developed economic capital model.
- total potential exposure (TPE: sum of registered credit limits).
- A list of insurance buyers over certain limits in accordance with reinsurance agreement conditions.
- application of underwriters estimates of premium income, ultimate loss ratios and ultimate commissions ratios to an actuarial risk earnings model to evaluate the appropriate earned income, reserves setting and costs basis for each reinsurance contract.
- measurement of reinsurance contract performance against control limits set by the underwriting guidelines.

# Management and mitigation

Underwriting risk is managed both on an individual cedant and aggregated basis by using a variety of tools, such as:

- regular detailed review of all reinsurance business for past underwriting years performance, triangulation development, individual buyer exposure development and aggregate total potential exposure management, market and country exposure;
- monitoring of risk and policy limit setting to ensure credit quality and performance of the underlying insurance products to reinsurance terms agreed with the client;
- reinsurance: transfer of a portion of the Company's insurance risk to external reinsurers/retrocessionaires of high quality credit rating, through a number of risk reinsurance arrangements that include quota share and excess of loss treaties;
- reinsurance underwriting guidelines which define and curtail the type of business
   Atradius Re is authorised to write, with specific guidelines to type of product,
   capacity limit, types of exposure, term and diversity of the underlying insurance
   ceded; and
- exposure management through monitoring of total potential exposure including the list of insurance buyers over certain limits in accordance with the reinsurance agreement conditions.

# Monitoring and reporting

Atradius Re has a number of risk management tools available to monitor the reinsurance portfolio for performance, exposure and financial development. The reinsurance system is used to record the risk profile, and to provide information for each reinsurance treaty. This allows the reporting of performance, total aggregate exposure and accounting reinsurance result.

The reinsurance system provides triangulation reporting, earnings estimates, categorisation of risks and market summary details. It automatically provides a suite of exception reports which give the underlying performance data for review by our reinsurance accounts, risk management, actuarial and finance areas. In addition to monitoring and recording TPE by treaty assumed on the reinsurance system, Atradius Re also uses a buyer database to monitor individual reported buyer exposure limits issued by

the original cedant that are in excess of agreed reporting thresholds. The Company uses the economic capital model as a tool to monitor the economic capital required by the reinsurance portfolio. This is calculated and reviewed quarterly.

## C-2 Market risk

#### **Identification**

Market risk is the risk that arises from the level of volatility of the market price of the Company's financial assets and liabilities: in particular its investment portfolio.

In terms of the basic solvency capital requirement (BSCR) calculated under the Standard formula, market risk with a charge of EUR 53m represents 9% of the BSCR of EUR 614m before diversification.

The Company is exposed to market risk by obtaining assets and incurring liabilities whose value is sensitive to movements in market prices. This risk is assumed and incurred by:

- investing in debt instruments;
- investing in equity instruments;
- underwriting insurance contracts generating provisions for future claims payments; and
- obtaining assets and incurring liabilities denominated in foreign currency.

#### Measurement

Market risk is measured by using several risk metrics, including:

- value-at-risk;
- capital models of external credit assessment institutions; and
- interest rate duration.

Value-at-risk and capital models from external credit assessment institutions are both used to determine potential maximum loss for a given confidence on the Company's financial instruments due to adverse movements in market prices. Interest rate duration assists in determining sensitivity of debt instruments and claims provisions to movements in interest rates.

## **Management**

Market risk is managed in several ways, such as:

- restriction on investment types, e.g. widely traded capital market instruments versus derivatives:
- diversification of the investment portfolio; and
- restrictions on the interest rate duration of the debt instruments portfolio and implementation of a strategic asset allocation (SAA).

## **Mitigation**

Market risk is mitigated on several layers in the undertaking. Firstly, constraints are set in the Group Investment Policy that has to be reviewed and approved by the Board of Directors. This policy gives the risk taker limits in which investment risk can be taken. Monitoring of compliance is undertaken by the Atradius Group Investment Committee, of which the Finance Director (FD) of Atradius Re is a member with full voting rights. This committee is responsible for taking investment decisions by majority vote and monitoring compliance with the Group Investment Policy.

## Monitoring and reporting

Market risk is monitored by and reported to the Atradius Group Investment Committee, on which the FD of Atradius Re is a member with full voting rights. The Group Investment Committee meets monthly and reviews metrics such as the value-at-risk, the interest rate duration of the investment portfolio and degree of diversification/concentration of the investment portfolio.

## Prudent person principle

The Company's policy is to invest only in investment grade, liquid investments taking into account the short interest rate duration of the claims provisions. Furthermore, the policy regarding financial instruments is to invest only in capital market instruments and refrain from investing in derivative instruments.

Market risk is the risk that the fair value of assets and liabilities that are sensitive to movements in market prices, decrease or increase due to adverse movements in equity prices, interest rates or currency rates. The Company exposes itself to these risks by holding assets and liabilities, the fair value of which is sensitive to movements in those prices.

To measure these risks, the Company uses several risk metrics. The most important of these are value-at-risk, capital models from the credit assessment institutions, interest rate duration and the mismatch between assets and liabilities, whose fair value is denominated in foreign currency. The Company uses an asset liability management (ALM) approach to analyse the impact of market risk on its assets and liabilities. The ALM is, among other things, based on the review of commitments resulting from the Company's insurance liabilities and aims to define the strategic asset allocation (SAA), so that these commitments can be met while maximizing the expected investment return.

The investment process must comply with the 'prudent person' principles:

- All assets covering technical provisions should be invested in a manner appropriate to the nature and duration of the firm's liabilities.
- Investments shall only be made into assets whose risks can be properly identified, measured, monitored, managed and controlled and reported.
- All assets shall be invested in such a manner as to ensure the security, quality, liquidity and profitability of the portfolio as a whole.
- Non traded investments shall be kept to prudent levels.
- Exposure to speculative grade assets must be prudent.
- Derivatives should be used only to reduce risks or facilitate efficient portfolio management; assets shall be properly diversified (asset type, issuer, group, region) to avoid excessive accumulation of risk in the portfolio as a whole.

## C-3 Credit risk

#### Identification

Credit risk (also referred to as counterparty default risk) is the risk of an adverse change in the Company's profit and/or the capital buffer arising from changes in the creditworthiness of a counterparty.

In terms of the basic solvency capital requirement (BSCR) calculated under the standard formula, credit risk with a charge of EUR 12m represents 2% of the BSCR of EUR 614m before diversification.

The Company is exposed to credit risk by obtaining assets whose face value depends on its counterparties ability to repay their obligations in full when due. This risk is incurred by:

- investing in debt instruments;
- depositing cash at credit institutions;

• reinsuring insurance contracts generating reinsurance recoverables and receivables from reinsurers.

#### Measurement

Credit risk is measured using several risk metrics, such as:

- capital models developed by external credit assessment institutions;
- credit ratings issued by external credit assessment institutions;
- payment history of reinsurance contract-holders; and
- days-past-due reports (credit control reports).

## Management and mitigation

A credit rating issued by an external credit assessment institution is used to ensure that the Company invests only in a debt instrument or enters into a reinsurance contract with an acceptable likelihood of being settled. Currently, the policy is to invest only in debt instruments with a credit rating of 'A-' or higher and to only enter into reinsurance contracts with reinsurers with a credit rating of 'A-' or higher.

In the event that the credit rating of a debt instrument falls below the minimum, the Group Investment Committee must decide whether the Company should divest the instrument. In the event that the credit rating of a reinsurer falls below the minimum, the reinsurance contract allows the Company to terminate the reinsurer's subscription to the reinsurance treaty or to require extra collateral from that reinsurer.

## Monitoring and reporting

Credit risk is monitored and reported to either the Group Investment Committee or Outward Reinsurance Committee and the Risk Committee, of Atradius Re.

The Group Investment Committee meets monthly and reviews the distribution of credit ratings within the investment portfolio, while the Risk Committee performs the same review of the investment portfolio on a quarterly basis. The Reinsurance Outwards Committee (ROC), which is an Atradius Group Committee, meets quarterly and reviews the credit ratings of reinsurers subscribing to the Company's reinsurance treaties.

## C-4 Liquidity risk

#### Identification

Liquidity risk is the risk that the Company would be unable to meet it's payment obligations when due. Liquidity risks originate from short term fluctuations in cash flow patterns on either incoming or outgoing cash.

#### Measurement

The Company measures its liquidity risk by forecasting its required payments and comparing these to its cash positions.

## Management

Liquidity risk is managed by using several tools, such as:

- holding marketable financial instruments that have daily pricing and the ability to be liquated in a reasonable time period;
- holding of ample cash reserves;
- monitoring of cash reserves to ensure sufficient liquidity.

## Mitigation

The management and mitigation of liquidity risk by the above management tools is reinforced by the Group investment policy: that investments should be only in financial instruments that can be liquidated in less than four business days. In practice, most of the Company's assets are marketable securities that can be readily converted into cash when required.

## Monitoring and reporting

The cash positions are monitored daily and reported on a weekly basis.

## **Expected profits in future premiums (EPIFP):**

The expected profits in future premiums (EPIFP) figure calculated in accordance with Article 260(2) of the Delegated Regulations at the end of 2016 was EUR 26.3 million.

## C-5 Operational risk

The Company defines operational risk as the risk of direct or indirect loss from inadequate or failed internal processes, people, and systems or external events. The Company uses

this definition to align with industry practice and the European Union Solvency II framework

In terms of the Basic solvency capital requirement (BSCR) calculated under the standard formula, operational risk with a charge of EUR 14m before diversification represents 2% of the BSCR of EUR 614m before diversification.

Within the Atradius Group, the Operational Risk Committee (ORC) is responsible for developing methods for the identification, assessment and response to risks, and for monitoring and further enhancing the overall risk management and control framework.

#### Identification

Operational risk is inherent in all the Company's key activities. The Company has developed a number of methods and tools to support not only identification, but also assessment and management of operational risk such as:

- risk registers;
- risk and control self-assessments; and
- financial reporting Controls.

Risks and the related controls are discussed at all levels, across the business.

#### Measurement

A local risk register is maintained and updated on a quarterly basis. The risk registers contain risks that management identifies as significant risks to achieving objectives and contain primarily operational risks.

## **Management and Mitigation**

To provide oversight and assurance in an auditable and efficient manner, the Company employs a dedicated governance, risk and compliance software platform (the "GRC portal") that integrates existing risk management activities across the business.

Operational risk is managed through a framework of internal controls that address the different areas where such risk is present. This internal control system includes:

- policies, procedures and standards;
- business continuity plans;
- manual and automated operational controls such as the segregation of duties, the application of signing authorities and role-based system privileges; and

• board approved authority matrix which must be read and understood by all staff, as evidenced by employee signature, and which outlines approval requirements.

# Monitoring and reporting

As noted above, the Company has a number of operational risk management tools, including risk registers, risk and control self-assessments and financial reporting controls, which are also used to monitor and report operational risk.

#### C-6 Other material risks

#### C-6.1 Concentration Risk

#### Identification

The Company is exposed to concentration risk primarily by accumulation of assets with a debtor and or underwriting exposure credit limits on a cedant, within a country, or within a trade sector.

## Management and mitigation

Concentration risk is managed using several management tools, of which the most important is concentration limits. For example, on the asset side, the Company limits investments with a single counterparty to less than 5% of the investment portfolio (this applies to non-government counterparties only). In terms of reinsurance, exposures are closely managed to monitor accumulations of risks across cedants and to assess the potential risk of claims occurring from the failure of individual companies (or a group of related companies).

## Monitoring and reporting

Concentration risk is monitored and reported to the Group Investment Committee, Outward Reinsurance Committee and the BOD depending on the type of concentration risk.

The Group Investment Committee meets monthly and reviews adherence to the policy on concentration limits for the investment portfolio while the BOD performs a similar review of the investment portfolio on a quarterly basis.

The Reinsurance Inwards Committee (RIC) reviews quarterly the concentration of credit limits underwritten by country, by trade sector and for the top 50 buyers.

Before each annual renewal of the Company's excess of loss reinsurance treaty, the Reinsurance Outwards Committee (ROC) reviews the proposed reinsurance treaties and adherence to the concentration limits for reinsurance treaties.

# C-6.2 Qualitative Risks

The following is a summary of the principal qualitative risks to which the Company is exposed:

**Strategic risk:** This is the risk arising from changes in the business environment and from adverse business decisions, improper implementation of decisions or lack of responsiveness to changes in the business environment.

Strategic risk categories are used to structure the process of identifying and assessing strategic risks. The main categories used within the Company are:

- Allocation of resources (risks linked to an inadequate strategic planning and budgeting process).
- Market developments (risks linked to market developments economic environment, clients, competition).
- Reputation (risks linked to an adverse change in the reputation or image of the Company.

The Company identifies and analyses strategic risks through various internal channels such as: the Strategy Forum (an internal discussion of strategic initiatives), the Strategic Risk Platform (comprised of senior management from various parts of the business to evaluate identified risks), Economic Research Department's overview of long-term macroeconomic risks, megatrends analyses, risk registers of individual business units, and quantifications of required and available capital in the long term planning and ORSA processes.

**Information and Communications Technology (ICT) Risk:** one type of operational risk is the risk of financial loss, disruption or damage to reputation due to failure of IT systems. Atradius Re considers and addresses various risks, including a disastrous event impacting a data centre, security incidents, network vulnerabilities, unauthorised activity, malicious code changes, and application specific vulnerabilities. A dedicated information security team is in place which actively monitors and takes action against threats. In addition to investments in defences and expertise, the Company also runs internal exercises to ensure the proper level of awareness among employees. Among the various measures taken, central event monitoring and logging software is in place, code quality tools are used in all projects and maintenance streams and application-specific vulnerabilities are addressed.

# C-7 Any other information

## Risk sensitivities

Sensitivities of the risk profile are explored by stress tests as well as scenario analyses. In the first, individual risk parameters and/or volume measures are being shocked, while in the second the combined effect of several adverse developments is considered. Among the relevant metrics is the Value-at-risk, underlying also the solvency capital requirement, at meaningful confidence levels.

Sensitivities and individual stresses are considered for individual risk categories and asset classes, e.g. a drop in equity market value, changes to corporate bond holdings, currency exchange rate fluctuations for market risks (see also section C-2). Specifically, for underwriting risk, the Company's most material risk, the Economic Capital model has been designed to provide a good reflection of the underwriting risk profile by delivering probability distribution forecasts. Not only its sensitivities to changes in key risk parameters, such as default probabilities, loss severity and correlation parameters, are investigated and assessed, but also the model itself is used to simulate outcomes under different future conditions.

More sophisticated scenario analyses taking into account the interplay and simultaneous occurrence of adverse developments are considered as part of the annual own risk and solvency assessment (ORSA) process. These analyses take a holistic approach and consider the impact of scenarios on the balance sheet, P & L statements and ultimately on solvency needs. For example, the 2016 ORSA has considered scenarios with simultaneous adverse developments on revenues, claims, and the value of the investment portfolio.

<u>Used variables</u>	<u>Shocks</u>	<b>Balance Sheet Impact</b>
Revenues	-10% in year <i>t</i> with moderate increase thereafter.	Indirect effect on B/S, mainly through retained profits and foreseeable dividends
Total Potential Exposure	+15% in year <i>t</i> with management actions thereafter	Indirect effect on B/S mainly through reinsurance recoverables and best estimates/risk
Claims ratio	+22%-pts in year t with slow recovery thereafter	margin (incl. other assets & other liabilities)
Equities	-20% in year <i>t</i> .	Reduction in market value
Corporate Bonds, Government Bonds, Structured Notes	-2.5% in year <i>t</i> .	Reduction in market value.

This and similar scenarios have been assessed. Under those, the Company would maintain a capital surplus over the time horizon of its long term business plan.

D.	Valuation for solvency Purposes	
D-(	-O Introduction	
<b>D</b> -1	-1 Assets valuation	
D-2	-2 Technical provisions valuation	
<b>D</b> -3	-3 Other liabilities valuation	
D-4	-4 Alternative methods for valuation	
	age <b>56</b> of <b>91</b>	

## **D-0 Introduction**

## **Valuation for solvency Purposes**

The Solvency II valuation principles are in accordance with articles 75-86 of the Solvency II Directive, articles 7-16 of the Delegated Acts and the secondary Solvency II laws and regulations.

The financial statements are prepared in accordance with the FRS 102 "The Financial Reporting Standard applicable in the UK and the Republic of Ireland" and FRS 103 "Insurance Contracts" ("UK and Irish GAAP").

For a full description of the applicable Solvency II valuation principles, please refer to Annex F-3 of this document.

Both the Solvency II balance sheet and the financial statements of the Company are presented in the currency of the primary economic environment in which it operates (its functional currency). Both the Solvency II balance sheet and the financial statements are presented in thousands of Euro (EUR).

Below are overviews and descriptions of the principal differences between the Solvency II economic balance sheet and the financial statements. When analysing valuation differences between the two different bases, it is necessary to consider the criteria for reclassifications e.g accrued interest which is included in other assets in the financial statements, is part of the financial investments in the Solvency II balance sheet. Such reclassifications have no economic impact. For full details of the different valuations and re-classifications, please refer to Annex F-2 of this document.

## **D-1** Assets Valuation

At the end of 2016, the Company had assets with a total value of EUR 1.193 million under Solvency II (EUR 1.385 million under Irish GAAP).

The following shows the differences by asset category:

All amounts in thousands of Euro, unless otherwise stated	Q4-2016	Q4-2016	
Assets	Solvency 2	Stat. Acc. (Irish GAAP)	Difference
Goodwill and other Intangible assets	-	9	-9
Property, plant and equipment for own use	128	128	-
Financial investments	959,763	941,894	17,869
Reinsurance recoverables technical provisions	53,409	84,810	-31,401
Other reinsurance recoverables			-
Deposits to cedants	26,789	26,789	-
Receivables (insurance, intermediaries and trade)	3,156	167,469	-164,313
Deferred acquisition costs	-	70,498	-70,498
Deferred income tax assets	47,361		47,361
Cash and cash equivalents	73,256	81,553	-8,297
Any other assets (miscellaneous, accruals, current tax)	29,056	11,437	17,619
Total	1,192,918	1,384,587	-191,669

- **Financial investments:** In the Solvency II balance sheet and in the financial statements, all financial investments are valued at fair value. However, in the Solvency II balance sheet, accrued interest is also included as part of the financial investments, whereas in the financial statements it is part of the accruals in other assets i.e. are reclassification differences only.
- **Reinsurance recoverables:** in the Solvency II economic balance sheet these are valued in accordance with the valuation criteria of the Solvency II provisions (see section D.2) and taking into account the probability of default of the reinsurers.
- **Deferred acquisition costs:** The Solvency II economic value of deferred acquisition costs is nil. (EUR 78 million under Irish GAAP).
- **Deferred taxes:** this balance relates to deferred taxes on the Solvency II risk margin.
- **Cash and cash equivalents:** There are no differences between the Solvency II valuation and the valuation of cash in the financial statements. However, in the Solvency II Balance sheet, a restricted deposit has been included in financial investments. In the financial statements, it is included as cash and cash equivalents i.e. a reclassification difference only.

- **Receivables:** In the financial statements, receivables in respect of future (pipeline) premium (incl. excess of loss) are included here. For Solvency II purposes, these amounts are considered as part of the best estimate liabilities.
- **Any other assets:** In the financial statements, the advance (unearned) reinsurance premium for future periods that has been received for short-term credit (re)insurance is recorded as part of the technical provisions. In the Solvency II Balance sheet, these are part of the accruals.

# D-2 Technical provisions valuation

# **Valuation Principles**

As prescribed by the Solvency II Directive (DIR), the technical provisions are made up of three components:

- **Provisions for claims outstanding (PCO)**: The PCO is the best estimate of cash flows relating to claim events that have already occurred, regardless of whether the claims arising from those events have been reported or not.
- **Premium provisions (PP)**: The PP is the best estimate relating to future claim events covered by insurance and reinsurance obligations falling within the contract boundary. Cash flow projections for the calculation of the PP include claims, expenses and premiums.
- **Risk margin** (**RM**): The Risk margin is intended to be the amount of capital that another (re)insurer taking on the liabilities at the valuation date would require over and above the best estimate. It is calculated using a cost-of-capital approach as prescribed within the Solvency II Directive.

For the purposes of this report, the best estimate, unless otherwise specified is gross, without deduction of the amounts recoverable from reinsurance contracts.

The calculation of the technical provisions includes cash flows associated with existing contracts, for obligations up to the contract boundary.

For all products the best estimate is determined by relevant actuarial and statistical methods in combination with realistic assumptions.

The methods used and the choice of loss occurrence definition determines the split between **PCO** and **PP**. This methodology is specific to the different products within the Atradius Re business.

## **Choice of contract boundary**

Contract boundaries are specified by product.

#### Loss occurrence

Claim events are considered as occurred when the contractual loss event as defined in policies have occurred. It should be noted that for short term credit insurance it is common that claims are reported before the contractual loss event date. This happens for all causes of loss, but notably for cause of loss protracted default. Such claims contribute to premium provision rather than to the provision for claims outstanding.

#### Reinsurance recoverables

The Atradius Re business' reinsurance protection derives from its reinsurance programme. The main programme consists an Excess of Loss (XOL) programme and a Stop Loss treaty (SL). There are also a number of quota share retrocession agreements on individual treaties.

The amounts recoverable from reinsurance contracts are estimated consistently within the boundaries of the underlying contracts to which they relate. The reinsurance recoverables are calculated directly, treaty by treaty in essence without approximation.

An adjustment for expected losses due to counterparty default is included in the estimate of reinsurance recoverables. The reinsurance panel predominantly has an S&P rating of A-or better.

## Risk margin

The Risk margin is defined as the cost needed to cover all future capital requirements until the final settlement of existing business.

The solvency capital requirement (SCR) is the risk capital required for one year only. Hence the SCR for individual points of time in the future needs to be estimated.

The Company follows the general guidance given under Method 1 within the EIOPA Solvency II Guideline 62 (EIOPA-BoS-14/166 EN). This assumes that the risk margin is based on a cost of capital approach for business that is considered "existing". For the cost of capital, a rate of 6% is used according to the Delegated Regulation (Article 39).

The overall approach used to calculate the risk margin is to perform a full calculation of the SCR at each future point in time using the standard formula with certain simplifications. The simplifications are used for the counterparty default and operational risk modules.

The method used to calculate the risk margin is based on the formula below which is prescribed in DR: Article 37(1).

$$RM = CoC \cdot \sum_{t \ge 0} \frac{SCR(t)}{\left(1 + r(t+1)\right)^{t+1}}$$

Where the cost -of c-Capital (CoC) rate used is 6% as is prescribed in DR: Article 39.

SCR(t) denotes the Solvency Capital Requirement referred to in DR: Article 38(2) at year (t). It is a formula similar to that used to calculate the actual SF SCR as outlined in DIR: Article 103.

# Overview of technical provisions

The following table shows the Solvency II gross and ceded technical provisions split by line of business and the risk margin as at 31 December 2016.

EUR million	Accepted proportional credit and suretyship reinsurance	Accepted non proportional credit and suretyship reinsuance	Total
Gross best estimate	326.4	1.4	327.8
Reinsurance recoveries	53.4		53.4
Net best estimate (including adjustments for CDR risk)	273	1.4	274.4
Risk margin	50.6	0.5	51.1

## **Comparison with the financial statements**

The most material differences between the SII and IFRS valuations of TP are:

- Change in bases of moving from IFRS to SII, as profit is recognised on IFRS UPR;
   and
- Change in assumptions, for the short term credit insurance product ceded by ACyC, that determines the Solvency II best estimate. In principle, underlying methodologies to arrive at a best estimate do not differ from current financial statements but calibrated parameters and assumptions reflect a probability weighted average.

# **Level of Uncertainty**

The frequency and severity of claims are affected by several factors. These include all factors that affect credit risk in general. Thus the status of the economy is a major driver of the frequency and severity of claims. Its effect may vary by country and sector. For trade credit risk, the behaviour of customers may also affect the frequency and severity of claims, for instance through risks inherent to their business activities and their risk management practices. Specific events (e.g. natural disasters) or structural changes in the economy (e.g. easier access to developed markets for producers in low cost countries), may impact the frequency and severity of claims. What specific events or structural changes are relevant in this respect will vary over time.

The bonding business usually incurs irrecoverable losses only when, after a bond call, any payments to beneficiaries cannot be reclaimed from the bonding customer, or its guarantors. This is almost always due to either the insolvency or bankruptcy of the bonding customer. Thus, in the end, the frequency and severity of claims is affected by similar factors as those affecting credit reinsurance.

All forms of credit reinsurance and bonding bear the risk that changes in legislation, in particular of insolvency law, may affect the amount and timing of claims payments or recoveries.

## D-3 Liabilities valuation

In Annex F-2, reclassification and valuation differences are shown separately. The following table shows the total difference per liability category (excluding technical provisions). For explanations on these differences please see below and for technical provisions please see D-2.

All amounts in thousands of Euro, unless otherwise stated  Liabilities	Q4-2016 Solvency 2	Q4-2016 Stat. Acc. (Irish GAAP)	Difference
Cash deposits from reinsurers	400	400 *	-0
(Re)insurance accounts payable	829	43,541	42,712
Deferred income tax liabilities	50,325	2	-50,323
Provisions other than technical provisions	-	-	-
Amounts owed to credit institutions	-	-	-
Payables (trade, not insurance)	-	-	-
Pension benefit obligations	-	-	-
Any other liabilities and current tax liabilities	81,469	25,340 *	-56,129
Subordinated loan	76,632	75,000	-1,632
Total	209,655	144,283	-65,372

- **Reinsurance accounts payable:** In the Solvency II balance sheet accruals for future premium and reinsurance commission that relate to periods for which the Company is at risk but has not yet written the premium are part of the technical provisions (best estimate). In the statutory balance sheet in the financial statements, these items are presented separately as reinsurance accounts payable under creditors.
- **Deferred income tax liabilities:** Due to the various differences in the accounting policies applied in the Solvency II balance sheet and the financial statements of the Company, differences also arise in the deferred income tax positions (e.g. due to the different bases of valuations of the best estimate liabilities).
- **Any other liabilities:** The advance reinsurance premium (UPR) and the related ceded balances for future periods that have been received for short-term credit (re) insurance are recorded as part of the accruals in the Solvency II balance sheet. In the statutory balance sheet in the financial statements, these are part of the technical provisions.

## D-4 Alternative methods for valuation

# Valuation of the subordinated loan provided to Atradius Re

The market valuation for Solvency II is based on the present value of the subordinated loan's cash flows discounted using the Euro government bond yield curve as a benchmark and applying an appropriate risk spread.

The credit spread applied is estimated using the credit spreads of market quoted subordinated bond issues by similar issuers and with similar rating and maturity profiles. The fair value estimate of the bonds is provided by an external independent valuation company, which uses its own proprietary valuation systems to value securities supported by economic and market assumptions from financial information providers.

- E-5 Non-compliance with the minimum capital requirement and non-compliance with the solvency capital requirement
- E-6 Any other information

# E-O Capital Management – Introduction

Atradius Re seeks to maintain a strong capital position, to support the evolution of the business, withstand financial stresses, meet all financial obligations and maximise returns to our shareholders, Grupo Catalana Occidente S.A. (GCO), while protecting its customers.

# E-0.1 Capital management – principles

The company has the following guiding principles and objectives in respect of its capital management:

- Sufficient capitalisation to be able to continue as a going concern after meeting all of its financial obligations.
- To meet the externally imposed regulatory requirements based on the EU Directive requirements of Solvency II, as an authorised reinsurer regulated by the Central Bank of Ireland ( "CBI" ).
- To maximise the return to our shareholders Grupo Catalana Occidente S.A. (GCO), while protecting our customers.

Available capital is managed from both an accounting and an economic perspective.

The Company calculates its solvency capital requirements in accordance with the solvency calculation requirements of Solvency II.

In order to ensure meeting the objective of sufficient capitalisation as described above, the Company's policy is to maintain a capital amount above the regulatory solvency capital requirement, to ensure that large loss events would not impair the ability of Atradius Re to carry on its normal course of business.

## E-0.2 Capital management – processes

The Company has embedded processes and procedures for:

- Capital planning;
- Capital monitoring; and
- Capital management.

These processes and procedures have the objective of ensuring compliance with externally imposed regulations and internally imposed requirements for capital adequacy.

Such compliance is ensured as follows:

- Regular assessment of solvency needs, taking into account the business strategy, resulting risk profile and applied risk limits.
- Calculation of the capital consumption of new and existing business.

## E-0.3 Reinsurance programme

The Company transfers a portion of its reinsurance risk to external reinsurers/retrocessionaires, through a number of reinsurance arrangements that include quota share and excess of loss treaties. The reinsurance treaties are reviewed annually and in accordance with the Company's policy to select only reinsurers with a high quality standard of solvency/rating. The normal minimum requirement is an 'A' level rating. During these annual reviews, the company assesses the optimal structure of the treaties for the forthcoming period(s), including the excess of loss treaties (the attachment points, spread of the layer and the number of reinstatements). There are several considerations during this review, including the cost of synthetic capital that reinsurance provides as measured by the economic capital model, and the Solvency II capital charge under the standard formula of the various reinsurance proposals.

#### E-1 Own funds

The structure of available capital follows the regulatory requirements for quality of capital in terms of (capital) tiering and coverage limits. Under Solvency II, own funds are classified into three categories ranked Tier 1, Tier 2 and Tier 3, with Tier 1 being the highest quality.

The following table illustrates the own funds by tier for Atradius Re as at 31 December 2016:

	Tier 1	Tier 2	Total
Basic Own Fund Items (EUR millions)			
Ordinary paid up share capital	0.6	-	-
Capital contributions	279.1		
Other reserves from accounting balance sheet	304.0	-	-
Adjustments to assets	(191.7)	-	-
Adjustments to technical provisions	277.8	-	-
Adjustments to other liabilities	(65.4)	-	-
Subordinated liabilities dated	-	76.6	-
Total basic own funds	604.4	76.6	681.0

#### Tier 1:

The called up share capital represents the nominal value of shares that have been issued.

The authorised share capital of Atradius Re amounts to EUR 635,000, all of which relates to called up share capital, presented as equity, and is divided into 635,000 ordinary shares with a nominal value of EUR 1 each.

The capital contribution represents capital received from our shareholders and approved as eligible Tier 1 capital by the Central Bank of Ireland.

#### Tier 2:

Subordinated loan provided to Atradius Re

On 20 April 2016 the shareholders of Atradius N.V. provided a subordinated loan to Atradius Re with a principle amount of EUR 75 million. The loan agreement was executed on 18 April 2016 and the funds transferred on 20 April 2016.

The interest on the subordinated loan was fixed at 5.0% per annum, payable annually in arrears on 20 April each year until and including the maturity date: 20 April 2026. Atradius Re may redeem the loan on the first call date: 20th April 2021, or thereafter on each interest payment date.

The subordinated loan qualifies as a Tier 2 basic own funds item as set out in article 73 of the European Commission's Solvency II Delegated Regulation (2015/35).

# E-2 Solvency capital requirement and minimum capital requirement

The table on the following page shows the Solvency Capital Requirement (SCR) calculated using the standard formula. The calculation uses no simplified calculation, undertaking-specific parameter or the duration-based equity risk sub-module. See also SCR QRT "S.25.01" in "F-1 Annexes all relevant QRTs".

The solvency coverage ratio (ratio of eligible own funds to the SCR) at 31 December 2016 was 127.2%. The ratio of eligible own funds to the minimum capital requirement (MCR) at 31 December 2016 was 471.4%.

# E-3 Use of the duration-based equity risk sub-module in the calculation of the solvency capital requirement

n/a

# E-4 Differences between the standard formula and any internal model used

For the purpose of adapting the solvency requirements to the risk profile of each company, the Solvency II regulations enable institutions to calculate solvency capital requirements using an internally developed underwriting risk model.

As part of the Atradius Group, Atradius Re has been modelling it's capital requirements for many years on the basis of an economic capital model prior to the introduction of Solvency II. As this model reflects the business model of the Company and its risk profile, the Company has continued to use it by working closely with the Atradius Group to adapt it to make it Solvency II compliant.

The internal model better reflects our business model and risk profile for the following reasons:

- it simulates the state of the economy;
- it accounts for risk mitigation measures the Company has in place e.g. reinsurance;
- it uses the same ratings and probability of defaults (PDs) in use by the Company;
- it accounts for concentration risk and the correlations between risks:
- it accounts for "dynamic exposure management" unique to credit (re)insurance: it is possible to cut limits/manage exposures;
- the standard formula is not appropriate for credit (re)insurance as underwriting risk is split into premium and catastrophe risk, which in essence is a double counting of risks e.g. a recession is not a catastrophe for credit (re)insurance as it is already covered by premium and reserve risk;
- we have several lines of credit (re)insurance with different risk profiles not reflected by the standard formula;

# E-5 Non-compliance with the minimum capital requirement and non-compliance with the solvency capital requirement

n/a

# E-6 Any other information

## Tax adjustment in SCR calculation

The tax adjustment used to lower the solvency capital requirement refers to the loss absorbing capacity of deferred taxes (LACDT). The tax adjustment at 31 December 2016 was EUR 49m, representing 8.4% of the basic SCR (BSCR) before the tax adjustment.

When calculating the solvency capital requirement, it is assumed that in the event of a shock event for which the magnitude of the SCR is required, in accordance with tax rules the consequent losses will be available on a 'continued going concern' basis to offset against future taxable income. The tax losses to be offset are limited to the lower of the (tax) losses and the future stressed taxable profits against which the losses can be offset.

# F-3 Solvency II Valuation Principles (excluding technical provisions – refer D-2)

The Solvency II valuation principles are in accordance with articles 75-86 of the Solvency II Directive, articles 7-16 of the Delegated Acts and the secondary Solvency II laws and regulations.

#### Functional and presentation currencies

The financial statements of the Company are presented in the currency of the primary economic environment in which it operates (its functional currency). Both the financial statements and the Solvency II balance sheet are presented in thousands of Euro (EUR).

#### **Transactions and balances**

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions. Foreign exchange gains and losses, that result from the settlement of foreign transactions and from the translation at year-end exchange rates of monetary assets and liabilities denominated in foreign currencies, are recognised in the income statement under FRS 102 'The Financial Reporting Standard applicable in the UK and Republic of Ireland" and are part of the eligible capital in the Solvency II balance sheet.

Monetary assets and liabilities denominated in foreign currencies are translated to the functional currency at the exchange rate at the reporting date. Non-monetary assets and liabilities that are measured at fair value in a foreign currency are translated to the functional currency at the exchange rate when the fair value was determined.

#### Software

Computer software acquired and computer software self-developed are treated as intangible assets and are valued at nil.

#### Property, plant and Equipment for own use (PPE)

In the Solvency II balance sheet PPE is stated at fair value. PPE consists of fixtures & fittings and other fixed assets. As an approximation of the fair value, PPE is measured in accordance with accounting principles applied for the financial statements.

In the financial statements, PPE is stated at historical cost less accumulated straight-line depreciation and impairment losses. The depreciation period is based on the estimated economic useful life of the asset

#### Financial investments

The fair values of financial instruments traded in active markets are based on quoted market prices at the end of the reporting period. The quoted market price used for financial investments held by the Company is the current bid price. Transaction costs on initial recognition of financial investments are expensed as incurred.

The fair values correspond to the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Whenever possible, the fair values are based on quoted market prices. If no quoted market price is available, we use valuation techniques based on market prices of comparable instruments or parameters from comparable active markets (market observable data).

In the financial statements, all financial instruments available for sale are classified as Level 1 of the fair value hierarchy (quoted prices in active markets), in conformity with the hierarchy disclosures in Financial Reporting Standard (FRS) 102.

# Accounts receivable on (re)insurance business

Accounts receivables on (re)insurance business include amounts due from agents, brokers, insurance contract holders and reinsurers.

Since the net book value of accounts receivable balances includes an allowance for bad debt and the remaining balances are substantially all current, the carrying amount is considered to be a good approximation of the fair value.

## Miscellaneous assets and accruals

The items included in miscellaneous assets and accruals are substantially all current and consequently the carrying amount in the financial statements is considered a good approximation of the fair value, for those items in the financial statements classified within any other assets in the Solvency II balance sheet.

#### Cash and cash equivalents

Cash and cash equivalents include cash on hand and short term deposits held on call with banks that are subject to an insignificant risk of change in their fair value and are used by the Company in the management of its short-term commitments.

#### Current and deferred income tax

Current tax is the expected tax payable or receivable on the taxable income for the year, using tax rates enacted or substantively enacted at the end of the reporting period, and any adjustment to tax payable in respect of previous years.

Deferred income tax is provided in full, using the liability method, on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the Company's Solvency II balance sheet. Deferred income tax is determined using tax rates (and laws) that have been enacted or substantively enacted at the end of the reporting period and are expected to apply when the related deferred income tax asset is realised or the deferred income tax liability is settled.

Deferred income tax assets are recognised to the extent that it is probable that future taxable profit will be available against which the temporary differences can be used.

# **Employee benefits assets/liabilities**

#### Pension

The company participates in a defined contribution pension scheme. The assets of the scheme are held separately from those of the company in independently administered funds.

#### Bonuses and annual leave

A liability for bonuses and profit sharing is recognised based on a formula that takes into consideration, amongst other things, individual targets and the profit attributable to the Company's shareholders. A liability is recognised where contractually obliged, or where there is a past practice that has created a constructive obligation.

The Company recognises a provision for annual leave accrued by employees as a result of services rendered in the current reporting period, and which employees are entitled to carry forward and use within the next 12 months. The provision is measured as the salary cost payable for the period of absence.

# Accounts payable on (re)insurance business

Receivables and payables include amounts due to agents, brokers and insurance contract holders. The carrying amount is considered a good approximation of the fair value.

# Trade and other payables

The trade and other payables due are substantially all current and consequently the carrying amount is considered a good approximation of the fair value.

#### Other liabilities

Other liabilities are substantially all current and consequently the carrying amount is considered a good approximation of the fair value.

# Current and deferred income tax

For the valuation principles of current and deferred income taxes see D-1 Assets.

# **Contingent liabilities**

Contingent liabilities relate only to non-insurance liabilities. If information about the current or potential size or nature of contingent liabilities could influence the decision-making or judgement of the intended user of that information, including the supervisory authorities, these (material) liabilities have been recognised in the Solvency II balance sheet. The value is based on the expected present value of future cash-flows required to settle the contingent liability over the lifetime of that contingent liability, using the basic risk-free interest rate term structure.
